DETAILED ACTION

Allowable Subject Matter

1. Claims 4 and 8 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-3, 5-7 and 9-20 rejected under 35 U.S.C. 103(a) as being unpatentable over Weber et al. (6,242,789) in view of JP 04348517 further in view of Houston (2002/0086465)

Regarding Claims 1-3, 5-7 and 9-20, Weber et al. disclose a vertical fuse and method of fabrication where in Fig. 14 a substrate 12 is located all the way bottom. On top of the substrate 12 a dielectric layer 14 is located. A conductive layer 16 is located on dielectric layer 14. Aluminum deposition layer 116 is located on top of the combination of dielectric layers 18 and 26. A vertical conductive/fuse layer is extends from the Aluminum layer 16 to the bottom conductive layer 16. Liner/sidewall layers 114 and 104 extend from the aluminum layer 1169 to the bottom conductive layer 16. Weber et al. fail to disclose the required gradual narrowing of the hole and required dielectric insulating/dielectric sidewall/spacers. However, JP 04348517 discloses a contact hole with polycrystalline semiconductor sidewall with hole narrowing towards

base of the hole where in Figs. 7 and 12 the required narrowing of the hole is disclosed.

Furthermore, Houston discloses a sub-lithographic opening for back contact or back gate where in Fig. 1B the sidewall spacers 108 that gradually narrow hole/opening 106 is oxide/dielectric.

It would have been obvious to one of having ordinary skill in the art at the time the invention was made to include the required hole narrowing and the required insulating/dielectric sidewall spacers in Weber et al. a as taught by JP 04348517 and Houston respectively, in order to have a semiconductor device with increased performance.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.
